identify the appropriate KPI(s) that will help the team to work towards this common goal. We expect our product data analyst to drive this initiative. Please describe has identifying the top lovel VOV In fact this is one of our main short term strategic goals for our product. However, we have yet to expect our product data analyst to drive this initiative. Please describe how you would work on identifying the top level KPI(s) for this critical strategic goal of the Product & Engineering team. VA KIRILLOVA KIRILLOVA KIRI

To able to understand what metrics to track and what KPIs to consider as the main ones, we need to ask ourselves the questions 1) what is the main mission (goal) of the company 2) what two 20 the product belong to. the product belong to.

Comatch refere

Comatch refers to 2 sided marketplace business model and mission of the company is to connect

Platforms like Comatch exist because there is a need for an intermediary to match the supply and demand sides of the platform in a more efficient way. The two sides of demand are incentivized to use the platform. demand sides of the platform in a more efficient way. The two sides of demand and supply need to be incentivized to use the platform to create strong network effects. The platform incentivized to use the platform to create strong network effects. The platform also needs to create unique and recurring value to both parties to retain them on the create. unique and recurring value to both parties to retain them on the system.

A few of the key material. KIRILLOVA KIRILLOVA KIR VA KIRILLOVA KIRI

- 2.Match rate -How often are companies actually filling their posted role on a site? And how often are experts finding jobs?

 3. Market depth Is there enough experts? Base 1.1. KIRILLOVA

 - 4. Time to match how long does it take a company to find an expert? How long does it take to receive the first application .. tak KIRI VIRILIOVA KIRILLOVA KIRI VIDILIONA KIRILLOVA KIRI WA KIRILOVA KIRILLOVA WELLOVA KIRILLOVA
 - 5.Cost to Acquire a Customer 'CAC' Jine KIRILLOVA

KIRILLOVA Step 0

- KIRILLOVA KIcn metrics should be 2. What success looks like. 3. Tracking plan for KIRILLOVÁ KIRILLOVA KIRII KIRILLOVA KIRILLOVA

Step 1 With feature NA KIRILLOVA KIKILLUV KIRILLOVA KIKILLUVA "

With feature "seniority filter" we must track product-oriented metrics including:

Feature usage, Acquisition channels, Time to value, Conversion (Feature usage, Acquisition channels, Time to value, Conversion funnels, User onboarding

1) are people using the feature? WA KIRILLOVA KIRILUVA KIR

1)are people using the feature?

total number of times people are using the feature

LOVAKIRILLOVAKIRILLOVAKIRILL the number of unique users who are using the feature the percentage of your total active users who are using the feature the average number of times per day users are using the feature

2) what kind of people using the

2) what kind of people using the feature? Understand difference conversion on accounts for companies(on level of company) and experts.

3) Analyze the impact of the new feature on retention

Do new users who use filter early in their experience (like their first day), retain better than new users who don't ? who don't?

4) Measure the impact of the new feature on your key conversion funnels.

Juse filter vs. those who don't use.

....an expert faster than people who don't use it?

Juse tilter vs. those who don't use.

...an expert faster than people who don't use it?

Juse tilter vs. those who don't use.

...an expert faster than people who don't use it?

Juse tilter vs. those who don't use.

Feature usage, Acquisition channels, Time to value, Conversion funnels, User onboarding.

Step 3

The next step is run experience. The next step is run experiments on the filter feature. Will encouraging more users to use feature to increase your retention and conversion KPIs? Set up experiments: increase your retention and conversion KPIs? Set up experiments to test the new feature, measure the three key metrics, and see if they hit the goals you outlined above.

Before running the experiment we should be agree on test setup and duration like length of the experiment, define KPIs to avoid the problem of peeking, because as I can see, we trying to do exact the opposite.

IDEAL WAY:

Set the goal- check usage feature

Decide what to test- state your hyp(two ver of page with and w\o feature)-define kpis(Conversion, usage, engagement) -agree on actions(missing part)

Create variations- confirm test measurability-agree on test setup and duration -Bayesian calculator -(missing part)

NA KIRILLOVA KIRILLOVA KIRILLUVA IRILLOVA KIRILLOVA KIKILLU LLOVA KIRILLOVA KIKILLUVI ere 1 What other restrictions are there for the experiment (marketing budget, ect). Feature filter is not high risk - we run experiment to 80/20 split. What is the cost of attraction at the stage of conversion to paid?
